September 14, 2026

Dear Hiring Manager,

I am excited to apply for the Senior Software Engineer position at your organization. With nearly six years of professional software engineering experience — including hands-on work with .NET Core since its early evolution — I have built scalable, high-performance enterprise systems that solve real business problems. My core expertise spans C#, ASP.NET Core, .NET 8, microservices, REST APIs, SQL Server, MySQL, Redis, RabbitMQ, Docker, and cloud-ready distributed architectures.

A highlight of my career has been designing and developing a payment gateway platform that processes more than one million transactions every day. Working at this scale has sharpened my expertise in performance optimization, concurrency, security, fault tolerance, transaction consistency, and highly available backend systems.

I enjoy solving complex engineering problems rather than simply writing code — whether that means designing clean architectures, optimizing APIs, improving system performance, implementing secure payment workflows, or building scalable backend services. My goal is always to deliver solutions that are reliable, maintainable, and built for long-term growth.

Beyond technical skills, I believe ownership is what distinguishes a strong engineer. I take responsibility for understanding business requirements, communicating clearly with stakeholders, reviewing implementation approaches, and delivering production-ready solutions to a high engineering standard.

I am also genuinely passionate about continuous learning, particularly in artificial intelligence, machine learning, and modern software architecture, and I adapt quickly to new tools that improve engineering productivity and product quality.

I am confident that my experience building high-scale financial systems, my strong foundation in modern .NET development, and my passion for engineering excellence would let me contribute meaningfully to your team from day one. Thank you for considering my application — I would welcome the opportunity to discuss how my background can support your organization's goals.

I look forward to speaking with you.

Sincerely,

**MD. Ikramul Islam Siddique**
